# Neurofunctional Prudence and Morality

A Philosophical Theory

**Marcus Arvan**

This book outlines a theory of prudence and morality that unifies a wide variety of findings in neuroscience with philosophically sophisticated normative theorizing. The author shows how human moral and prudential cognition and motivation are known to involve over a dozen brain regions and capacities. He then outlines a detailed normative philosophical theory of prudence and morality based on neuroscience and lived human experience. The result demonstrates how this theory coheres with and explains the behavioral neuroscience, showing how each brain region and capacity interacts to give rise to normatively prudent and moral behavior.
